~~TOP SECRET~~

A. INFORMATION OBTAINED FROM USS PUEBLO CREWMEMBERS

1. Classified Documents

a. Location of Cryptologic Classified Data Aboard USS PUEBLO During This Patrol:

(1) Classified cryptologic material was maintained in two areas aboard the USS PUEBLO prior to the incident which led to her capture. These spaces were: (a) the Research Operations room, occupied by the Naval Security Group Detachment, and (b) the Administrative Office used by the Officer-in-Charge as the main office for Naval Security Group matters and the prime storage area for organizational files as well as excess or duplicate documentation not required on-hand in the Research Operations room. These two spaces were considered to be "secure" areas (limited access to Naval Security Group ((NAVSECGRU)) or other appropriately cleared personnel) and, in addition, the Research room was manned continuously, therefore, documents were not always stored in safes or files. This was particularly true in the Research Operations room where classified documents were: (a) kept at the Supervisor's desk, (b) on a shelf over the Supervisor's desk, (c) at the intercept positions, (d) in drawers at the intercept positions, and (e) in a box located near the radio telephone position. The material located in the Administrative Office was normally placed in the two safes; however, on the day of the incident some classified documentation was known to have been placed on top of the Officer-in-Charge's desk, as well as in the center drawer of this particular desk.

(2) Although it has been virtually impossible to pinpoint the location of all classified material, some specific items were determined to be located in the Research Operations room immediately prior to the USS PUEBLO incident. These items are identified in the SIGINT Inventory, Section IV.B. of this report.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

(3) The Administrative Office contained two safes which were used for storage of personnel data, administrative items, material not specifically required on-hand in the Research room, and duplicate copies of some of the documents located in the Research Operations room. It is known, for example, that the majority of the SICR's aboard the USS PUEBLO were being reviewed by the OIC of the Detachment and were placed in the center drawer of his desk prior to capture. On the morning of 23 January 1968, the Administrative Assistant was in the process of compiling the USS PUEBLO trip report, using the June 67 patrol report of the USS BANNER as an example, and had completed some 10-12 multilith masters. It was established that the Administrative Office maintained all permanently assigned NAVSECGRU personnel jackets, 1967/68 message files, classified Communications Technician (CT) examinations for advancement in rating, NAVSECGRU operating instructions in addition to the excess or duplicate technical documents.

b. Non-Inventoried Items On-Board USS PUEBLO:

(1) In addition to the many inventoried documents identified as having been on-board USS PUEBLO, the debrief of the crew revealed that additional cryptologic material not listed on any inventory, was also on-board. This material was compiled as a direct result of the daily activities of the Security Group Detachment (support aids, raw intercept, traffic logs, etc.) or consisted of information which various individuals gathered from previous duty stations and subsequently brought aboard the USS PUEBLO when reporting for duty. It must be pointed out that specific and detailed identification of this data is extremely difficult in that much of the information provided by the crewmembers was obtained some eleven months after last observing any of the material. Additionally, a significant amount of the information contained in their personal notebooks was compiled many months before the capture of the USS PUEBLO, thereby compounding a critical identification problem.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

(2) The debriefs revealed that the Research Operations room contained at least the following uninventoryed documents:

- (a) Twenty to twenty-four burn bags containing at least one to two days (22-23 January) of operational intelligence monitor traffic, carbon paper and operator scratch paper.
- (b) Voice frequency listings at the Radio Telephone position.
- (c) Intercept logs and raw traffic from manual Morse, Radio Telephone and ELINT intercept for period 10-23 January 1968.
- (d) [redacted] and Radio Telephone intercept tapes collected during period 10-23 January 1968.
- (e) Radar plotting chart reflecting positions of intercepted North Korean radars.
- (f) Supervisor's daily log and "pass down log" probably classified at least "COMINT CHANNELS".
- (g) [redacted] kept with daily changes received from [redacted].
- (h) ELINT intercept summary messages and intercept tapes.
- (i) Instructions for "O" branchers use in routing traffic internally aboard USS PUEBLO.
- (j) Detachment Standard Operating Procedures (SOP) - content unknown.
- (k) ELINT parameters listing developed by ELINT operators.
- (l) Internal memorandums for SECGRU Detachment.

~~TOP SECRET~~

# TOP SECRET

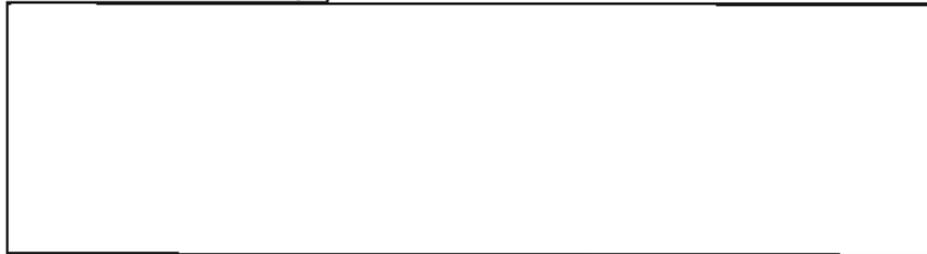

(m) Letter files for USS PUEBLO.

(n) CO and OIC narrative report of USS PUEBLO mission off North Korea.

(o) Personal notebooks of at least eight (8) CT's containing very detailed and highly classified cryptologic material.

(3) Probably the most damaging information among the uninventoried items were the personal notebooks maintained by various crewmembers aboard the USS PUEBLO. These books were compiled for the purpose of assisting the individual in the execution of his assigned professional duties and, further, to aid in the preparation for advancement of rating examinations. No personal record of the contents was made, therefore, identification of the information contained in these books was determined on the basis of the ability of each individual to recall the contents of his own notebook. As a result of these discussions, it has been determined that at least the following information in both cryptic and detailed form is available to the North Koreans from personal notebooks:

(a) At least 15 booklets on the Soviet

(b) (1)  
(b) (3) - 18 USC 798  
(b) (3) - 50 USC 403  
(b) (3) - P.L. 86-36

(b) Information on Soviet

(d) Soviet Air order of battle.

 (b)(3)-18 USC 798  
 (b)(3)-E.O. 86-36

(4) Information available indicates that these notebooks were subjected to only cursory attempts at destruction (i.e., only torn or ripped).

c. Destruction Attempts Prior to Capture:

(1) Emergency destruction of classified material accomplished aboard the USS PUEBLO was conducted over a limited period of some 20 to 40 minutes prior to the boarding of the vessel by the North Koreans. Although the order to "prepare for emergency destruction" was given fairly early in the incident, actual implementation of destruction procedures was withheld until the North Koreans opened fire. In the Research spaces, physical destruction of material commenced some five to six minutes prior to the receipt of this order from the bridge. It was obvious that the destruction that actually occurred was accomplished in almost total confusion and in a completely disorganized fashion.

(2) The following events, related to destruction, occurred in the Research Operations room and Administrative Office:

~~TOP SECRET~~

~~TOP SECRET~~

(a) Fires were started in two or three trash cans which were placed in the passageway outside of the Research room and attempts were made to burn classified papers.

(b) Almost all of the material from the Administrative Office and some additional data from the Research room was then placed in weighted bags with the intent that they would be jettisoned; however, only one unidentified bag was actually thrown over the side. Further attempts to jettison material (i.e., through a porthole) were hindered by gun fire from the North Koreans; therefore, no further efforts were made to discard material in this manner.

(c) Continued efforts to burn material in the trash cans caused considerable smoke which filled the spaces and necessitated the removal of the cans to the open deck.

(d) An insufficient number of weighted bags were available for the amount of classified material on board and resulted in the use of laundry bags or mattress covers which were then filled with material.

(e) Even though much of the classified material was placed in various bags and could have been jettisoned, continued gun fire by the North Koreans resulted in an order to cease further attempts at throwing material over the side. This order was issued not only on the basis of Korean gun fire, but also by the fact that the water depth was only 34 fathoms, far less than the 100 fathoms believed by Research personnel to be required by Navy regulations for deep water destruction.

(f) Documents, message rolls and other classified material were then torn into pieces and scattered about the deck. Some of the material in the laundry bags (or mattress covers) was dumped and scattered about in the passageway outside the Research spaces with the intent that these documents would be set on fire. Unfortunately, this never occurred, and

<sup>7</sup> ~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

at the time of capture, this scattered material remained in the passageway. Additionally, an undetermined amount of material remained in bags, completely intact.

(g) During the burning, tearing and scattering of material, attempts were made to destroy highly classified personal notebooks; however, these efforts were short-lived as priority attention was given to the operational intelligence (GOPI) monitor rolls.

(h) An undetermined number of these GOPI monitor rolls, containing many highly sensitive intelligence items transmitted over the Navy's OPINTELL broadcast were torn, partially burned or scattered about the deck in both the Research space and adjacent passageway.

(3) Although it was some time before the North Koreans actually entered the spaces, no further attempts were made to destroy material after the boarding of the USS PUEBLO by the North Koreans.

d. Status of Classified Data Immediately Prior to Capture:

(1) At about the time of the boarding of the USS PUEBLO by the North Koreans, all efforts directed toward emergency destruction ceased, even though destruction was far from complete. It was ascertained that only one bag was jettisoned prior to boarding; however, it was not possible to identify the specific contents. Except for the unidentified material jettisoned, and the small amount actually burned in waste paper baskets (again unidentified), the following was the status of the remainder of the classified Special Intelligence material:

(a) The passageway immediately outside of the Research spaces was completely littered with material (some partially torn or ripped and others intact), while one or two laundry bags (or mattress covers) remained intact and filled with classified documents.

8 ~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

(b) The floor of the Research spaces was also completely littered with paper, some crumpled, some ripped in half and some torn into small bits. Other classified documents remained intact at the operator's position, Supervisor's desk, and at the desk of the OIC in the Administrative Office.

(2) It is estimated that 50 to 80 percent of the classified documents known to have been on-board the USS PUEBLO are now in the possession of, at least, the North Koreans. While some of the material was torn or ripped to some degree, it must be assumed that the North Koreans will attempt to recover as much documentation as possible.

e. Conclusions:

(1) It is virtually impossible to identify specific documents destroyed during the destruction process and, because of time constraints, limited facilities, enemy gun fire and information provided by the crewmembers of the USS PUEBLO, it is concluded that 50 to 80 percent of the classified documents maintained on board are now in the possession of, at least, the North Koreans. This conclusion is supported by evidence that:

(a) Only one bag was jettisoned, and that in water only 34 fathoms deep which could have allowed for recovery of this bag by the North Koreans. (North Koreans claimed recovery.)

(b) Burning of material was extremely limited and was accomplished in only two or three trash cans placed outside of the Research spaces with no attempt at "bulk" burning.

(c) Much of the documentation was torn and thrown on the deck, and could (with some effort) be reconstructed into complete documents.

(d) A number of documents originally intended to be jettisoned or set on fire were left intact in bags aboard the USS PUEBLO.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

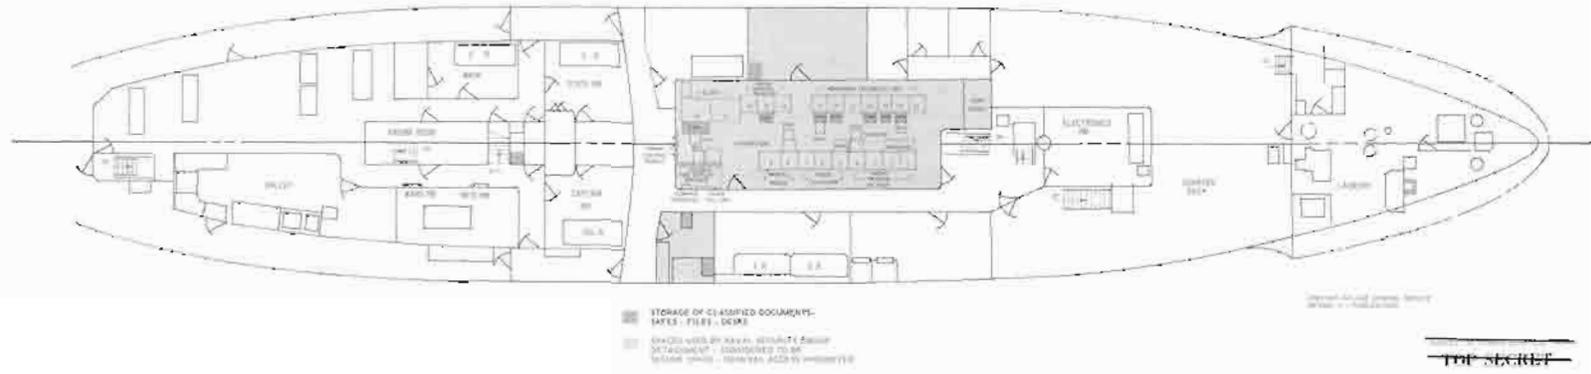

(e) Some documents were left in drawers of positions and desks.

(2) Except for the very few specific documents actually known to have been burned, all other material contained in the SIGINT Inventory (Section IV.B.) is considered as in the possession of the North Koreans.

2. Equipment

a. General

(1) The individual intercept equipments aboard the USS PUEBLO were not classified, although in the past certain tuners of the WLR-1 ELINT receiver were considered to be CONFIDENTIAL. Any sensitivity in regard to intercept equipment results from the integration of various equipments into an intercept "position" and the assigned mission of that "position". The tasks performed by an intercept "position" using various equipment combinations as well as the signal targets assigned can divulge specific SIGINT interests. With this perspective, considering the knowledge in SIGINT collection operations displayed by the North Koreans and the information obtained from various crewmembers, the SIGINT mission of all intercept positions aboard the USS PUEBLO are considered compromised.

(2) Although crewmembers have stated that they did their best to destroy all intercept equipments aboard the USS PUEBLO, it is estimated that only about 5% of the total equipments was destroyed beyond repair or usefulness. Even this 5% estimate cannot be viewed with optimism in view of the number of related maintenance manuals and spare parts captured intact as well as the knowledge gained from interrogations of the USS PUEBLO crewmembers. A contributing factor is the assumption that the North Koreans have a copy of the "Equipment and Facilities" book.

(3) The destruction of equipments, as attempted, is best described as confused and disorganized. The disorganization may have stemmed from the lack of training in emergency destruction, the inadequacy of (or unfamiliarity with) an emergency destruction bill, and as a result of the primitive tools available for use in destroying equipments. (The only tools readily available were fire axes, sledgehammers, small ballpeen hammers, and chair legs.) There was a total of eleven crewmembers in the Research Spaces at various times during the destruction period. However, the number of fire axes and sledgehammers available, and the effectiveness of eleven crewmembers swinging a sledgehammer at rack mounted equipments in the small area only added to the disorganization and confusion.

~~HANDLE VIA COMINT CHANNELS ONLY~~

<sup>13</sup>  
~~TOP SECRET~~

~~TOP SECRET~~

(4) There is no evidence available to indicate that equipments (except for a small piece of unidentified test equipment) were removed from the racks. The damage to the front panels was extensive but resulted in "locking" the equipments in place. Once it was realized that very little damage to internal components was being accomplished an unsuccessful attempt was made to remove the equipments for further destruction. The debriefing of various crewmembers indicated that in a few instances, however, the internal components of some equipments were destroyed or damaged.

(5) In those cases where specific information is available on damage to the internal components, only the Winston recorders, CEI-416 Receiver, WLR-1, and one or two R-390 receivers were mentioned. Although it can be definitely established that some effort was made to destroy the circuitry of some specific equipments, there really is no way to estimate the extent of the damage. In the case of the R-390 receivers it is apparent that several were left intact while others received extensive damage. From the debrief of various crewmembers, the appearance of the equipment from a front view would indicate extensive damage. This appearance could explain the opinions of those crewmembers who stated that "the equipment looked pretty well smashed up".

(6) Of interest, but perhaps caused by a natural inquisitiveness on the part of the North Koreans because of attempted destruction, or the uniqueness of these equipments, are the questions posed concerning specific intercept equipments. These questions included information on the WLR-1, Sonagraph, AN/BRD-6, Winston Recorders, Special Printer Position and Visicorder. These questions were probably posed because of the fact that these equipments were damaged more extensively than others.

b. Conclusion

In summary, it must be assumed that the North Korean capture of the intercept equipments advanced

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

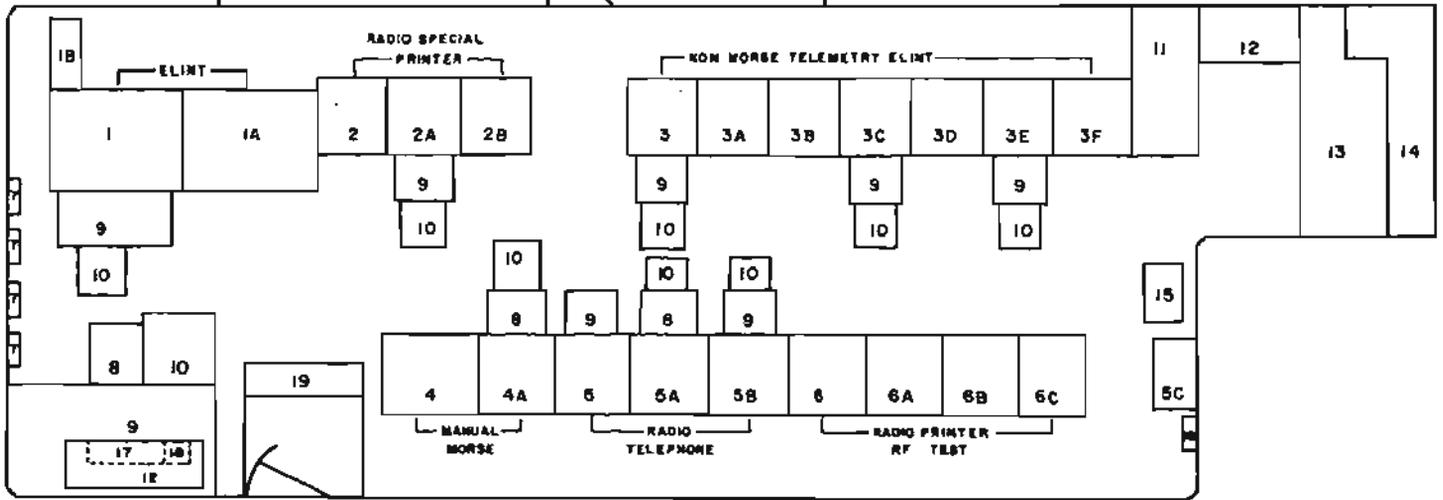

their knowledge of U.S. SIGINT interests and intercept equipment technology. The damage impact of any destruction to the intercept equipments was probably negligible because of:

(1) Spare parts, undamaged equipments, equipment and facilities book and related maintenance manuals captured intact.

(2) Information on the mission of individual positions as divulged to the North Koreans by the crewmembers during interrogations.

~~TOP SECRET~~g. EQUIPMENT DESTRUCTION CHART

<u>Equipment Nomenclature</u>	<u>Position</u>	<u>Method of Destruction</u>	<u>Remarks</u>
<u>PS114 Winston Recorders</u>	17, 18	Chair Leg	Opened them up and ranned them best I could.
		Hammer	Very well smashed up.
		Hammer/Axe	Reconstruction very doubtful. Smashed.
		Unknown	
		Sledge Hammer	Used sledge on heads.
		Sledge Hammer	I beat on the heads - making them inoperable.
			Smashed.
			Heads gone.
			Recorders were smashed by Strano.
<u>Oscilloscopes</u>	20	Hammer	I did go around and bust all the Oscilloscopes I could find.
	10		The scopes on the two demodulators were busted.
			"Smashed" to great extent.
			We destroyed the cathode ray tubes on the oscilloscopes.
2 Fairchild Scopes	17,13		Smashed.
SAS 3100 & I Branch Scope	15, 16		Smashed.
MDU-5 Scope	18		Broken.
<u>1508 Honeywell Visicorder</u>	12	Hammer/Axe	Reconstruction impractical/unreparable. (Spaces unknown)

<u>Equipment Nomenclature</u>	<u>Position</u>	<u>Method of Destruction</u>	<u>Remarks</u>
<div style="border: 1px solid black; width: 100px; height: 15px;"></div>			
<u>Demodulators</u>		Hammer/Axe	Were smashed pretty good.
Scope	12		Not a whole lot of damage internally.
R390	13		Bashed in completely.
Plugging Cables	14		Left intact.
<u>RYCOM R2174/4RR</u>		Sledge Hammer	Smashed.
	5	Hammer/Axe	Were hit hard and damaged.
<u>Receivers</u>			
R390	9, 5	Sledge Hammer Hammer/Axe	No compromise - unclassified. Reconstruction impracticable Destroyed two
CEI 416	21	Sledge	Mixer amplifiers pulled out and destroyed. Crystals probably not removed. I tried to destroy circuitry inside.
R-1051		Sledge Hammer	Smashed.
R-175	11, 7, 21, 9	Sledge	R-1051, R-1151, R390, not destroyed. Smashed.
R-1385	5, 6, 7, 19		Tuners smashed. Partial.
R-31	20, 18		Beat on it, looked pretty well destroyed.
Low Band under 2nd R390	8		Had sledge hammer in it.
<u>KD-2 Camera (Part of WLR-1)</u>		Sledge Hammer	Destroyed "beyond use."

**~~TOP SECRET~~**

~~TOP SECRET~~

<u>Equipment Nomenclature</u>	<u>Position</u>	<u>Method of Destruction</u>	<u>Remarks</u>
<u>UGC #20 Teletype</u>	1, 2		Smashed beyond use.
<u>Sonagraph</u>	4		Smashed.
<u>AN/BRD-6 D/F</u>	9		"Looked well destroyed" might be beyond repair. Scope smashed - didn't know about internals. Scope smashed. Scope destroyed.
		Fire Axe Sledge Hammer	
<u>WLR-1</u>	10, 11	Sledge Hammer	4 top tuners & IP 480 destroyed. Could not use again. Smashed. Strano removed parts and smashed them individually. Completely destroyed by Strano. 50% - pulled drawers out of bays and smashed with hammer. Receiver battered; scope smashed. Bay #1A were pulled out--outsides smashed don't know about inside. Banged up fairly well. Beyond repair, tubes pulled, individual tuner pulled. Not sure of BEZEL, 5 gun scope destroyed. Destroyed beyond repair. Destroyed beyond repair. Hammered very completely.
		Fire Axe Hammer Axe	
		Sledge Hammer	
		Sledge/Axe	
<u>CV 1916</u>	15		Not destroyed.
<u>Time Code Generator</u>			No info.

~~TOP SECRET~~

<u>Equipment Nomenclature</u>	<u>Position</u>	<u>Method of Destruction</u>	<u>Remarks</u>
<u>TD-570</u>	16	Sledge	Damaged.
<u>Convertors</u>	3, 4	Fire Axe	Badly damaged - (Assoc. w/UHF receivers for Voice interc).
<u>Miscellaneous</u>	8, 9		Receivers/Recorders on Morse voice position smashed internally.

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

~~TOP SECRET~~3. Verbal Disclosures

During the detention of the crew of the USS PUEBLO, classified cryptologic and Special Intelligence - associated information was disclosed, and/or may have been disclosed, through several media other than the captured classified documents. Classified information was certainly divulged to the North Koreans during the formal interrogations and in other interviews and conversations. Additionally, classified cryptologic information was disclosed in the various "confessions" and letters which were penned by the crew of the USS PUEBLO during their period of captivity. Finally, information may have been disclosed through intra-crew discussions of classified data in areas vulnerable to North Korean electronic eavesdropping.

The information disclosed during crewmember interrogations and/or "conversations" with the North Koreans includes (1) that which was responsive to North Koreans questions (and thus reflects North Korean interests) and (2) that which was divulged although not necessarily in direct response to a North Korean query. In this latter category, it should be noted that some responses were apparently designed to steer the North Koreans away from areas considered more sensitive in nature [redacted] which was disclosed in order to avoid interrogation on [redacted]

Intra-crew discussions of classified information is treated separately wherever practical in this report in order to distinguish between that information known to have been compromised (i.e., disclosed directly to the North Koreans) and that information which may have been compromised. The distinction is required because of the ambiguity surrounding the subject of electronic surveillance of the detention spaces by the North Koreans. While a majority of the crew are convinced that their rooms were not "bugged", at least one returnee reported that he was told by the North Koreans that "bugging" was being conducted. Additionally, several returnees reported

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

~~TOP SECRET~~

their observation of a "shotgun" microphone, aimed in their direction at a distance of 75-100 yards, while they were outside on the "playing field."

It should be noted that the analysis of non-documentary disclosures is derived in the main from the debriefings of the USS PUEBLO crewmembers. As a result, the factual completeness of this analysis is dependent upon the accuracy of memory, willingness to provide information and recall capacity (over an eleven month period) of the individual members of the PUEBLO crew.

The classified cryptologic-associated information disclosed orally through interrogations and discussions has been categorized according to subjects which, in turn, have been subdivided as to Direct Disclosures (i.e., interrogations and confessions) or Indirect Disclosures (i.e., intra-crew discussions). The subjective categories include:

- a. General
- b. Mission of the USS PUEBLO
- c. SIGINT Processing and Analysis
- d. SIGINT related locations
- e. Confessions/Letters
- f. Conclusion

(1) General Cryptologic Operations

(a) Direct verbal disclosures to the North Koreans included the following facets of the U.S. SIGINT operations:

1 Intercepted traffic (all of which is placed on 6-ply paper) is forwarded to NSA via courier (including tape recordings) and/or in electrical reports; the latter reports include times (of intercept), frequencies and callsigns. ESV associated telemetry also is forwarded to NSA for processing (reportedly by computer). Magnetic tapes of ELINT intercepts of radar signals are forwarded to the

 (b) (3)-50 USC 403  
 (b) (3)-18 USC 798  
 (b) (3)-P.L. 86-36

~~TOP SECRET~~

2 Communications Technicians (CTs) are assigned to U.S. aircraft carriers and/or aircraft. In regard to U.S. airborne operations, CT's are involved in operating (or instructing others in the operation of) the ECM (ELINT) equipment.

3 The U.S. conducts electronic surveillance of Soviet [redacted] with a prime objective of collecting telemetry during Russian missile launch/re-entry operations.

[redacted]

5 The meanings of COMINT, ELINT and SIGINT and the meanings and differences between SECRET/SECRET SAVIN, TOP SECRET/TOP SECRET TRINE or DINAR, CONFIDENTIAL and HANDLE VIA COMINT CHANNELS ONLY were discussed.

(b) (1)  
 (b) (3)-50 USC 403  
 (b) (3)-18 USC 798  
 (b) (3)-P.L. 86-36

(b) Possible indirect disclosures, as a result of intra-crew discussions, touched upon several general aspects of cryptologic operations.

1 The duties of CT's including previous Temporary Assigned Duties (TADs) of PUEBLO crewmen, on board destroyers and aircraft carriers [redacted] were discussed; the discussion of duty on board carriers included references to Soviet overflights of the carriers. Additionally, discussions in unspecified detail were held on U.S. intelligence collection off the [redacted]

(b) (1)  
 (b) (3)-P.L. 86-36

2 The Operational Intelligence Broadcast and electronic signal jamming were discussed in undetermined detail.

(2) Mission of the USS PUEBLO

The USS PUEBLO, its electronic equipments, its mission and its capabilities, naturally were of special interest both to the North Koreans (in their interrogations) and to her crewmen (in their "private" conversations.)

45 ~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

(a) SIGINT Collection Equipment on board the USS PUEBLO was of particular interest to the North Koreans. They apparently payed greatest attention to those equipments which had suffered the severest damage during the destruction exercise.

1 WLR-1: In addition to their possession of the Facilities Book picture of the WLR-1, the North Koreans were provided a drawing (albeit possibly inaccurate) of the position. The North Koreans were told the frequency range of the WLR-1 receiver, its use in the intercept of radar signals, the characteristics of signals collected (e.g., 1 microsecond pulse) and their appearance on the IP-480 scope, how to analyze "traces", and other general information on how to operate the WLR-1. The North Koreans were advised of the range of the WLR-1 (reported to be "50 miles") and that the DF capability was considered to be poor and, in fact, non-existent below 1000 kilocycles (KCS). The time code generated signal and its recording on track eight of the associated WINSTON Recorder, as well as other aspects of the operations of these recorders, was disclosed.

2 The operations and technical characteristics of virtually all collection receivers were disclosed. For example, the North Koreans were told the frequency ranges of the AS-899, R-390, RC-32, SRT-31, WRT, R-1026 and R-1385. The North Koreans reportedly were told (erroneously) that the R-31s were used in the tracking of U.S. satellites.

3 The radiotelephone position, including the techniques for sideband, tuning of the voice/ciphony carrier frequency and how signals were recorded on the WINSTON Recorder was explained to the North Koreans. The North Koreans expressed interest in its capability to collect [redacted] signals.

4 The North Koreans were informed about the radioprinter position, including its configuration (e.g., R-390, demodulator recorder and printer) and how the antenna was patched to the receiver, demodulator and keyer.

**TOP SECRET**

5 The details of the KAY-101 Sonograph and its operations were explained as was the 1309 Visicorder (for which a drawing also was provided) and the RYCOM. At least the front panel of the AN/BRD-6 (DF) equipment was sketched for the North Koreans. The North Koreans specifically questioned the function of the NMGS position and a demultiplexer.

6 In summary, the North Koreans asked about, and/or had explained to them, the purpose and function of virtually every piece of SIGINT collection equipment on board the USS PUEBLO. In fact, the North Koreans informed one crewmember that they, the North Koreans, were capable of using the R-390, R-1385 and oscilloscope.

(b) The SIGINT mission of the USS PUEBLO, including specific targets as well as general SIGINT operating capabilities, was disclosed directly to the North Koreans.

1 The North Koreans were informed that the USS PUEBLO's general targets were Korea, [redacted] and the USSR, with particular attention to be paid to the location and intercept of the communications and radar emissions of the North Korean Army and Navy, airfields and radio stations. It was disclosed that the USS PUEBLO had: (1) located (by Radio Direction Finding) [redacted]; (2) had made about 130 intercepts of signals from 6-8 types of radars; (3) intercepted [redacted] information; and (4) that the North Koreans were told the USS PUEBLO did not have the antenna capability to accomplish the tracking of satellites. Additionally, a full frequency spectrum search was to be made for North Korean Naval communications.

2 In order to accomplish their mission, it was made clear that the intercept frequency spectrum ranged from 0-4000 gigacycles (COMINT and ELINT) although improper antennas decreased the capability in the UHF and SHF ranges. The modes of communications being

intercepted were identified as manual Morse, radioteletype, [redacted] and radiotelephone, and new/unusual signals. On the ELINT side, it was disclosed that radar signals were intercepted, located by RDF and analyzed.

3 It was disclosed that radiotelephone intercepts were to be transcribed on-board and that some intercepted radiotelephone intercepts were retained for analysis of codes and other data included therein.

(3) SIGINT Processing and Analysis

Numerous, although frequently minor, aspects of cryptologic analysis and processing were disclosed to the North Koreans.

(a) The case notation system was explained (as to what the notations were and how they were assigned) with about ten case notations disclosed along with 10-15 associated callsigns.

(b) Intercept and traffic identification techniques, e.g., the checking of callsigns against callsign rotas and lists, the use of frequency rotas, etc., were described. It was disclosed that on-board the USS PUEBLO were manuals to assist in signal and traffic identification and radar type discrimination (by differences in RF and PRF) and that differences between the communications of the several North Korean services could be distinguished. The use of the ITU (Berne) callsign listing in radio direction finding (RDF) operations also were divulged.

(b)(1)  
(b)(3)-50 USC 403  
(b)(3)-18 USC 798  
(b)(3)-P.L. 86-36

(c) Information on the [redacted] [redacted] was elicited by the North Koreans, albeit apparently in no great detail, and they were told that one crewman learned the [redacted]  
[redacted]

(d) The more common [redacted] [redacted] (but purportedly not [redacted] the more sophisticated or specific systems), were explained to the North Koreans, as were single channel radioprinter (1T1D), sidebands (AM, SSB, double SSB with suppressed

(b)(3)(1) 5441852309898

(e) The North Koreans were told that the

[redacted]

(f) The North Koreans were given certain specific ABC radar covernames, i.e., TOKEN, CROSSLOT, KNIFEREST, MOONFACE and WHIFF.

(g) Additionally, the North Koreans demonstrated specific interest during their interrogations and discussions in the meanings of ICHTHYIC, "P&R", (Processing and Reporting), DFS, PPM, CLICKBEETLE, [redacted] MARABOU, HAMPDEN, and DRAMBUIE. The Koreans were provided with the meaning of AGTR and demonstrated awareness of the meaning of SMRIS, MARS/VENUS/PLUTO operating areas and PINKROOT operations as these terms relate to the USS PUEBLO, USS BANNER and USS PALM BEACH.

(b)(3)(1)  
(b)(3)(1) 565052304003  
(b)(3)(1) 5141852309898  
(b)(3)(1) 5441852309898

(4) SIGINT Related Locations

(a) The amount of compromised information regarding SIGINT collection sites revealed by the USS PUEBLO crewmembers during captivity varied relative to the crewmembers background. Other than the information provided about [redacted], the amount of SIGINT information divulged by any one individual would appear relatively minor. However, a compilation of everything each different individual divulged about the various stations, including missions and capabilities, would provide the information necessary to reconstruct the worldwide network of collection sites and their production flow of ELINT, COMINT and Direction Finding information.

(b)(3)(1)  
(b)(3)(1) 565052304003  
(b)(3)(1) 5441852309898

~~TOP SECRET~~

**TOP SECRET**

(b) The physical layout and basic organization was provided for almost all of the locations included in the attached list. As regards [redacted] there were many diagrams drawn of the entire base and the operations complex. The North Koreans produced a chart on their own, showing the base and the operations complex, probably produced from the collection of charts and organizational structures provided by various crewmembers. They questioned many of the crewmembers on specific locations of divisions and buildings from this chart. Therefore, it can be assumed that the [redacted] operations spaces, divisions, capabilities and some specific target information were provided the North Koreans.

(c) The following list of individual locations in alphabetical order were either discussed with or revealed to the North Koreans. The information regarding these locations was extracted from confessions, letters, and the crewmembers recollection of interrogations by the North Koreans.

1 ADAK, ALASKA: It was disclosed that part of the mission of Adak includes [redacted] [redacted] targets and that Adak acts as a D/F station in the Pacific DF network. A general organizational diagram of Adak was also provided as well as the fact that one crewmember "learned" manual Morse and teletype operations while stationed at Adak.

2 ASSISTANT DIRECTOR, NAVAL SECURITY GROUP (ADNSG): The location of ADNSG was given as collocated with NSA at Fort Meade. One crewmember described his job at ADNSG as "maintaining continuous awareness of Soviet Naval elements [redacted]"

3 [redacted] The following information was provided to the North Koreans:

a Soviet Navy targets between [redacted] [redacted] were copied at [redacted]

b An organizational diagram of the station was drawn including number of personnel.

50

~~TOP SECRET~~

10 SOUTH KOREA: Crewmember told that there are Army and Air Force stations in South Korea probably involved in an effort to gather information on North Korea.

(5) Confessions/Letters

(a) All PUEBLO crewmembers were involved in writing confessions and letters (both individually and jointly) while in captivity and although a large number of these letters have been released (either by the Koreans or the recipients) very few confessions are available for evaluation. A great deal of information regarding the contents of this material was provided by the crewmembers during debriefing; however, this section deals primarily with the actual letters/confessions which are available vice what each crewmember provided during debrief based on his recollection of the material.

(b) The crewmembers debriefings did indicate that a great deal more classified information was contained in the written confessions than the letters and this is borne out by a review of the available material.

(c) Certain observations can be made regarding all of this material. The majority of letters were written in March and August 1968. The March letters contained a number of references to the mission of the ship, the destruction of classified material, the capture of documents, and some letters even provided a description of the job of the author. The August letters were more "personal" and contained fewer references to any sensitive matters. Confessions were written at various intervals during confinement and the number and detail of this material varied with each crewmember. There were joint confessions (as well as joint letters of apology and a joint letter to the President) signed by all of the crewmembers, but the majority of the confessions released were written by the officers and were written shortly after capture. These confessions detailed the mission of the ship and a considerable amount of classified information. Although classified, none of the available information is unique to the confessions (i.e., the same material was

~~TOP SECRET~~

~~TOP SECRET~~

provided to Koreans in the captured documents and interrogations) and consequently the details are not included in this section of the report. Further, there were a number of other confessions written during confinement (e.g., each crewmember wrote a detailed confession just prior to release); and the only information available regarding the contents of this material was obtained from the crewmembers during debriefing.

(d) In addition to the letters and the confessions, another means of providing the Koreans with information regarding the mission of the USS PUEBLO would be the press conferences. The text of these conferences were reviewed for possible disclosures of classified material and although there was a considerable amount of sensitive information discussed, again the details were readily available to the Koreans in captured documents, written confessions or as the result of interrogation of the crew.

(e) One other item worthy of note is the fact that the letters and the confessions were also tape recorded by the Koreans. Some of this material was (and possibly will be) released via radio broadcast vice publication in a written form.

(6) Conclusion

Based on a review of information obtained through crewmember debriefings, published confessions, available letters, etc., the following conclusions have been reached in regard to verbal disclosures of information to the Koreans:

(a) The interrogations and written material provided the Koreans detailed information not otherwise available. This is particularly true in the area of previous experience, jobs, training schools and prior assignments.

(b) A significant portion of the oral and written material was already available to the North Koreans by virtue of the capture of documents and equipments aboard

~~TOP SECRET~~

~~TOP SECRET~~

the USS PUEBLO. These type disclosures were probably most beneficial to the Koreans in that they apparently aided the interpretation and understanding of the captured material and provided the North Koreans a ready gauge as to the degree of cooperation of the individual crewmembers.

(c) A great deal of the information was disclosed in a piecemeal fashion (i.e., a number of items on a certain subject were derived from a number of crewmembers or from the same crewmembers in separate interrogations). Although divulged piecemeal, the compilation of this material could easily provide a comprehensive picture on a number of subjects which were of interest to the North Koreans. This was also obvious from the debriefing as it was necessary to look at all the crewmember's statements to get an estimate on the totality of possible compromises.

(d) Possibly of greatest importance is the fact that the completeness and accuracy, etc., in this report, of the information orally provided to the Koreans, is dependent upon the individual crewmember's recollection of what were at times extended discussions (with the Koreans) which took place at various intervals over the period of eleven months.

(e) There were a number of confessions written by the crewmembers during confinement (each crewmember wrote at least one and some of these were quite lengthy) which have never been released by the Koreans. It has been established that a number of these confessions were quite detailed and contained SI information; however, the only information regarding the contents of this material included in this report has been obtained, once again, from the debriefing. For this reason, it is probable that the report of damage assessment regarding confessions is relatively incomplete.

(f) The North Koreans displayed particular interest in other SIGINT units around the world, collection equipment and the previous duties of the men. It appears that a portion of the information elicited was directly related to the degree of knowledge the North Koreans held

~~TOP SECRET~~

~~TOP SECRET~~

on a particular subject or the need to have a particular individual expound on his previous assignment/training, etc., guided by the captured service records.

(g) Finally, to arrive at a conclusive assessment of damage in this section of the report is extremely difficult. Although this information (i.e., confessions/interrogations) is essential for any comprehensive evaluation, the completeness and accuracy of this data is viewed with less confidence than with the remainder of the report. Although it can be established that a great deal of information was provided the North Koreans in oral and written form, a combination of certain factors, i.e., crewmember ability to recall information, uncertainty of room "bugging", validity of hearsay, lack of corroborating evidence and the time interval between the event and the debrief, all tend to reduce the probability of a comprehensive evaluation. Rather, it appears that the information listed in this section (particularly that data passed to the North Koreans during interrogation) can best serve as:

1 An aid to determine North Korean interest, and

2 An indicator of the type and variety (not completeness) of the information provided.

~~TOP SECRET~~/ TECHDOC 102TITLE: Ground-based ELINT Collection OperationsCLASSIFICATION: SECRET GP-3

CONTENT: Outlines the philosophy and methods of conducting ground-based ELINT collection operations. Identifies types of ELINT search and applications against generic types of ELINT signals.

IMPACT: Because the information is general in nature, its loss or capture is considered negligible.

/ TECHDOC 106TITLE: Morse Search and Development Concept of OperationCLASSIFICATION: SECRET SAVIN

CONTENT: This document sets forth principles and techniques applicable to Morse Search and Development. It describes the principal and secondary objectives of MSD, type of assignments, tuning techniques, MSD analysis, processing and support.

IMPACT: The loss of this document would reveal a general description of Morse Search and Development operation. Specific MSD locations and specific intercept results would not be disclosed.

/ TECHDOC 107TITLE: Non-Morse Search and Development OperationsCLASSIFICATION: SECRET HVCCO

CONTENT: This document sets forth the principles and techniques applicable to the Non-Morse Search and Development (NMSD) program.

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

~~TOP SECRET~~

IMPACT: The loss of this document reveals:

(1) the philosophy of NSA in conducting a world-wide Non-Morse Search and Development (NMSD) program.

(2) the objectives, in general terms, of NMSD.

(3) the methods, i.e., Machine Intercept Analysis Reports, used by NMSD field elements to report items of COMINT interest, although these items are not specified, nor is the format of the MIAR given.

✓ TECHDOC 400

TITLE: SIGINT Product Reporting

CLASSIFICATION: TOP SECRET HVCCO

CONTENT: This document defines the primary mission of the National SIGINT Effort (NSE) as the reporting of information obtained from foreign signals and alludes to a relationship between USIB and NSA, collaborating and Third Party SIGINT efforts. Defined in the document are (1) the fusion of COMINT and ELINT, (2) interpretation of SIGINT, (3) the types and uses of collateral, and (4) the various types of reporting, both product and technical, including a listing of technical and operational characteristics of interest to the NSE.

IMPACT: The loss of this document reveals open source statements regarding the NSE and (2) reveals the extent of the NSE interest in foreign signals.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~✓ TECHINS 1001 with Changes 1 through 4TITLE: Standard Intercept Symbols and AbbreviationsCLASSIFICATION: SECRET HVCCO

CONTENT: This document contains standard abbreviations and their expansions to be used by SIGINT collectors and processors. It is cross-referenced and covers such general subjects as international communications terms, standard abbreviations for describing frequency measurements, signal quality and symbols used to indicate the technical basis for identification of collected signals, (i.e. identified by callsign and schedule or identified by frequency, procedure and placename.

IMPACT: A. The loss of this document should have very little if any impact on the SIGINT community. In reality it is nothing more than a list of common communication and communications related terms which are used by communications personnel world wide.

B. Section 3 paragraph 7 and paragraph 13 appear to be the only areas of this document that could provide some help to unauthorized users. However even these paragraphs are of no use unless the unauthorized user has access to classified SIGINT correspondence on a continuing basis.

✓ TECHINS 1002TITLE: Morse Collection ProceduresCLASSIFICATION: SECRET HVCCO

CONTENT: This document prescribes the procedures used by the Morse Intercept Operators when recording and transcribing Morse signals. Also included (Annex I) are procedural instructions for the implementation and use of Data Preparation Devices (An/GGC-15).

IMPACT: The loss of this document reveals procedures used by the Intercept Operators and the advances made by NSA

77

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

~~TOP SECRET~~

in achieving an automatic data preparation device for preparing intercepted traffic for computer processing.

✓ TECHINS 1003 with Change 1

TITLE: Radiotelephone Recording and Transcription Procedures

CLASSIFICATION: SECRET SAVIN

CONTENT: Basically this document provides the standard terminology and procedures to be used by intercept units engaged in the intercept of radiotelephone transmissions.

IMPACT: The impact on the SIGINT community due to the loss of this document to unauthorized persons should be minimal.

Except for the degree of thoroughness this document should offer little more than the knowledge of how the U.S. COMINT community performs the recording and transcription of radiotelephone transmissions.

The loss of the document should have no effect on future radiotelephone collection.

✓ TECHINS 1005 with Changes 1 and 2

TITLE: Radioprinter, [REDACTED]

CLASSIFICATION: SECRET SAVIN

CONTENT: A. Establishes standard procedures for the collection of Radioprinter, [REDACTED] except Non-Morse Search and Development assigned to COMINT cover,

B. Included in this document are detailed instructions for the handling of Russian [REDACTED] [REDACTED] A complete description of the depth of knowledge and [REDACTED] cooperation on this problem.

(b) (1)  
(b) (1) - 18 USC 798  
(b) (1) - 50 USC 403  
(b) (1) - P.L. 86-36

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

C. It further describes the degree of concern placed on the  problem by the U.S.

(b) (1)  
 (b) (3)-50 USC 403  
 (b) (3)-18 USC 798  
 (b) (3)-P.L. 86-36

D. The depth of U.S. commitment of intercept for all data systems is contained.

IMPACT: The loss of this document must be considered to be serious. While not divulging any particular success or failure it does combine into and document the depth of the U.S. commitment to the collection of these signals.

Based on information contained in this document unauthorized persons could alter or influence the transmission programs of these signals. If this was to happen it could mean a serious loss of information.

TECHINS 1007

TITLE: Morse Search and Development Cover and Reporting

CLASSIFICATION: SECRET SAVIN

CONTENT: This document defines the classification of Morse targets detected by Morse Search and Development (MSD) positions and prescribes the treatment to be given each class. The document also prescribes MSD reporting requirements.

IMPACT: The loss of this document reveals:

(1) MSD definitions of unidentified and identified transmissions.

(2) MSD STRUM format instructions

(3) Follow-up procedures

(4) Assignment of TEMPO notations on MSD intercept

(5) Use of collective digraphs

(6) Procedures for reporting Mission Support Statistics

SECRET-HANDLE VIA COMINT CHANNELS ONLY.

IMPACT: The loss of this document reveals:

(1) A very large portion of all equipments,  
both classified and unclassified, utilized in the SIGINT  
effort.

(2) Rack layouts, functional block diagrams,  
lists of equipments and the capability of certain POEIs  
(Position Equipment Indicators) as contained in TECHINS 1037.

(3) SCA/NSA address indicators.

/ TECHINS 1037, With Change 1

TITLE: Equipment and Facilities Standards for Intercept  
Stations

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document, classified SECRET-HVCCO, is a  
resource standards document prescribing selected general and spec-  
ific community wide standards for SIGINT operations buildings,  
antenna fields, and equipment configurations for each position,  
to be used wherever applicable in support of the development  
and review of resource requirements.

The standards listed in Annex A, "SIGINT  
Operations Building and Antenna Field," are very general.

The standards listed in Annex B, "Equipment  
Composition of Positions," are very specific. The equipments

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

~~TOP SECRET~~

listed in this section are all equipments of an electronic, electrical and electro-mechanical nature that are an integral part of a SIGINT position and have been standardized by NSA to increase community-wide operational and technical efficiency. In Annex B there is a complete description of our Identification Code System from which the six element, alpha numeric code designator is established, and this is commonly called POEI (Position/Equipment Indicator) in the Agency's and SCA's Programming and Tasking documents.

In Annex B, each position sheet includes the following:

Position Code  
 Capability  
 Equipment  
 Floor Space Required  
 Weight  
 Power Required

Under the Capability Section of the position sheet is given the capability of of the position in relationship to the requirement which established the position. Specifics included in the capability are:

- (a) The frequency range of the receivers.
- (b) Capability of Demodulating and Demultiplexing general type transmissions.

(c) In some of our [redacted] position sheets, the capability section includes specific signals the position is capable of on-line processing.

(b)(1)  
 (b)(3)-50 USC 403  
 (b)(3)-18 USC 798  
 (b)(3)-P.L. 86-36

(d) In some Radioprinter position sheets, we go into detail on our capability for collecting and demultiplexing [redacted]

Included in the Equipment section of this document is practically every known equipment used in the SIGINT community. This equipment is listed by AN or commercial designator plus the title of the equipment.

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

~~TOP SECRET~~

In conclusion, it must be said that some position sheets are very brief and some do go into great detail of the capability for collecting and processing signals.

Loss of this document could permit the appraisal of:

(1) Our Identification Code System used throughout the

(b) (1)  
(b) (3)-50 USC 403  
(b) (3)-18 USC 798  
(b) (3)-P.L. 86-36

(2) Our capability for collecting and to a certain degree our capability for processing every signal being transmitted.

(3) Information on practically every equipment being used in the SIGINT community.

If OPINS 10/20/30 Annex A are used with TECHINS 1037, the impact would be:

(1) Inform the user of our complete capability for SIGINT at each site listed in OPINS.

(2) It could be ascertained what our intercept mission is at each site.

/ TECHINS 1038

TITLE: Manning Standards for SIGINT Positions (C)

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document prescribes the number of personnel required for the manning of collection processing, and operational management positions programmed in OPINS 10/20/30. The Manning Standard is the number of personnel required to operate a given type of position with a specific Position Equipment Indicator (POEI) for (1) each eight-hour watch and (2) continuous 24-hour operation (four watches).

IMPACT: The loss of this document reveals:

(1) The types of collection, processing and operational management positions used by NSA.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

(2) The actual number of people required on duty to operate given positions.

(3) The method used by NSA to prescribe the number of personnel required to operate positions.

/ TECHINS 1042

TITLE: Instructions for Preparing and Packaging for Forwarding of Intercept Traffic and Related Material

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document establishes uniform procedures for preparing and packaging for forwarding of intercept traffic and related material to the National Security Agency and other Cryptologic Centers.

(1) Reveals the various means used to record intercept traffic [redacted]

[redacted]

[redacted]

(4) Discloses bundle label and tape label format and official addresses to be used by members of the COMINT Production Community in forwarding material to NSA and the [redacted] and pinpoints the OPI's for various types of material. Also listed in this document are the different Field Stations allowed to exchange material with the [redacted]

IMPACT: The loss of this document constitutes a serious compromise since it reveals:

(1) Formatting and forwarding procedures for various types of material.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

✓ TECHINS 1044

TITLE: Manual for the Selection and Application of Delivery Distribution Indicators (DDI's)

CLASSIFICATION: SECRET HVCCO

CONTENT: This document provides the procedures governing the selection and application of Delivery Distribution Indicators (DDI's) by message originators for those messages intended for automatic internal distribution at DIRNSA, [redacted] and selected other addressees served by the DDI program. Target country entities are grouped in separate sections of this document by virtue of category, country and service, and approximately 600 DDI's are shown through specific listings and diversification of DDI assignments.

(b) (1) :  
(b) (3)-60 USC 403  
(b) (3)-P.L. 86-36

Listed in TECHINS 1044 are:

(1) The country(ies) or target(s) area of foreign communications in which this Agency and associated activities have a specific interest, e.g., [redacted]

(b) (1)  
(b) (3)-50 USC 403  
(b) (3)-18 USC 798  
(b) (3)-P.L. 86-36

(2) Types of messages and the definition of each category, e.g., crypto-analytic, traffic analytic, raw, SIGINT product, special item, administrative and operational,

(3) The service representing the facility or source within the target area, and

(4) References to various other TECHINS for specific details regarding a particular subject.

IMPACT: This document reveals association between DIRNSA and second and third party sources by short title activity designators, although there is no geographical location included. The distribution portion also reveals association between DIRNSA and various field organizations by activity titles, organizational titles and authorized "F" designators. Additionally, the importance of material forwarded under DDI ZZZ is revealed by virtue of the material to which it is assigned (CRITIC) and by the distribution of this material which includes the Office of the President and other unspecified high level governmental activities.

TECHINS 2022, Annex A

TITLE: Marking of Additional Callsign Data on Soviet Raw Traffic

CLASSIFICATION: TOP SECRET TRINE

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

✓ TECHINS 2048

TITLE: Standardized Procedures to be Followed for Reporting  
Changes in Soviet Signal Operational Instructions

CLASSIFICATION: TOP SECRET CODEWORD

CONTENTS: This document establishes special procedures to be followed by the U.S. SIGINT Community in the event of significant changes in Soviet signal operational instructions and further provides instruction as to what SIGINT activities are to report and gives detailed instruction as to how this will be accomplished.

IMPACT: The loss of this document constitutes a serious compromise since it reveals:

- (1) The method used by NSA to provide systematic attack against changes in Soviet signal operational instructions;
- (2) A fixed machine format for reporting.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~/ TECHINS 4001(b) (1)  
(b) (3)-50 USC 403  
(b) (3)-18 USC 798  
(b) (3)-P.L. 86-36TITLE: Serialization of SIGINT ProductCLASSIFICATION: TOP SECRET HVCCO

CONTENTS: Establishes requirements for the serialization of product reports and translations according to content. Acts as a working aid in allowing the reader to make a rapid assessment as to the general content of a serialized report/translation.

IMPACT: The loss of this document is a serious compromise as it reveals: (1) a complete listing of National SIGINT Effort (NSE) target countries, (2) the method used by the NSE to provide systematic differentiation among targets being reported upon, (3) the definition for and use of special subject suffixes for [REDACTED]

[REDACTED] including examples, and (4) the method used by the NSE reporting elements to serialize SIGINT product.

/ TECHINS 4002TITLE: SIGINT READINESSCLASSIFICATION: SECRET SAVIN

CONTENTS: This document defines SIGINT READINESS as a state of special preparedness and watchfulness occasioned by unusually significant and possibly ominous developments, either directly in the international situation or in SIGINT target activity within the context of a tense or potentially tense international situation. This document further: (1) defines and provides instructions pertinent to the three conditions of SIGINT READINESS applicable to the U.S. SIGINT producing community, (2) defines the authority and roles of NSA, NSA Field Activities, and the SIGINT reporting units, and (3) describes relationships to other readiness/alert programs, i.e., collaborating center programs, the CRITIC program, and the DEFCON system.

100

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

~~TOP SECRET~~

IMPACT: The loss of this document constitutes a serious compromise as it: (1) confirms a working relationship with collaborators - [ ] (2) reveals criteria established for the declaration of a SIGINT READINESS condition, and thus an indication of the ability of the members of the SIGINT community to exploit foreign communications; and (3) identifies and provides criteria for the [ ] SIGINT ALERT system, the [ ] SIGINT READINESS system, and the JCS DEFCON system.

✓ TECHINS 4003

(b) (1)  
 (b) (3)-50 USC 403  
 (b) (3)-18 USC 798  
 (b) (3)-P.L. 86-36

TITLE: Authorized Recipients

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document identifies U.S. and collaborating center recipients (other than numbered SIGINT stations) who are authorized to receive SIGINT product on direct distribution, the command(s) serviced by the recipient, and the location of the recipient.

IMPACT: The loss of this document is a very serious compromise as it reveals: (1) the extent of the Intelligence Community and its interest in receiving SIGINT information, (2) the recipients of SIGINT product and their location, and (3) the command structure of the Intelligence Community.

✓ TECHINS 4010

TITLE: SIGINT Publication Manual

CLASSIFICATION: SECRET SAVIN

CONTENTS: Provides the general principles, rules and procedures governing the nature and form of SIGINT reports and translations.

IMPACT: The loss of this document constitutes a negligible compromise. While information contained in other TECHINS is referenced or restated, this document is primarily a style manual and would shed no unique light on the National SIGINT effort against foreign communications targets or any success derived therefrom.

101

(b) (3) - 18 USC 793  
(b) (3) - P.L. 86-36✓ TECHINS 4011

TITLE: SIGINT Support to Unified and Specified Commands and Other Overseas Consumers (C)

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document describes procedures which will be followed by cryptologic elements in the fulfillment of the SIGINT requirements of unified and specified commands and other overseas customers. It defines the general category of intelligence requirements and provides details of procedures to be followed by NSA and cryptologic field activities in the handling of customer requirements. It reveals the relationship of NSA [redacted]

[redacted] targets. It also refers to [redacted] as theater command ELINT centers and the appropriate channel for ELINT requirements. Annex A of the document consists of a list of all the major commands throughout the world, the SSO servicing the command, the NSA or cryptologic unit which provides SIGINT service to the command and the cable address of the NSA or cryptologic unit. Annexes B and C provide sample formats and examples of monthly requirements status reports which Service Cryptologic Field Headquarters are required to submit to NSA and relate specific targets to specific cryptologic units.

IMPACT: The loss of TECHINS 4011 is considered serious because of the general information contained concerning the cryptologic effort.

✓ TECHINS 4014

TITLE: SIGINT Electrgrams and Spot Reports

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document defines and prescribes procedures for issuing ELECTRIGRAMS and SPOT Reports. Definitions and procedures for the use of the various supplementary and technical vehicles are also included.

102

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

~~TOP SECRET~~

IMPACT: The loss of this document constitutes a negligible compromise as it contained primarily administrative and editorial procedures that since have been revised and issued in a new TECHINS.

/ TECHINS 4015

TITLE: SIGINT Product Distribution

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document prescribes procedures for the establishment, use, and maintenance of SIGINT product distribution symbols, lists, and catalogues. Also included as annexes are: (1) special procedures for afloat units, (2) guidelines on product distribution to cryptologic organizations, (3) sample texts for establishment of distribution lists, and (4) a sample WBCAP (Weekly Recapitulation) report.

IMPACT: The loss of this document, by itself, compromises little more than the administrative procedures for handling distribution of product.

/ TECHINS 4016

TITLE: Reporting Designators

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document establishes procedures for assigning, changing, and deleting reporting designators of U.S. units producing SIGINT product and lists reporting designators assigned to each U.S. and collaborating center reporting unit. It states that DIRNSA will assign such designators and indicates the system of application for: (1) parent and independent units, (2) subordinate units, and (3) non-product reporting units authorized to issue special unserialized Tactical Reports (TACREPs).

103

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

IMPACT: The loss of this document reveals the scope of and the participants in the National SIGINT reporting effort.

✓ TECHINS 4019

TITLE: Handling of SIGINT Critical Intelligence (CRITIC)

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document provides instructions for selecting and reporting critical intelligence by U.S. SIGINT organizations. It defines critical intelligence as information indicating a situation or pertaining to a situation that affects the security or interests of the U.S. to such an extent that it may require the immediate attention of the President. It identifies and defines: (1) the CRITICOMM system, (2) the scope of the CRITIC program, and (3) the responsibilities of the participants. It establishes exacting criteria and reveals specific procedures for the issuance of a CRITIC, a LATERAL CRITIC, and CRITIC Follow-ups.

IMPACT: The loss of this document constitutes a serious compromise of the USIB CRITIC criteria (as contained in DCID 7/1) and the U.S. SIGINT community's procedures for the reporting of intelligence that meets those criteria.

✓ TECHINS 4034

TITLE: Reporting of Technical Information in COMINT  
End Product

CLASSIFICATION: SECRET SAVIN

CONTENTS: This document defines and lists the aspects of SIGINT considered to be technical in nature and prescribes procedures and conditions under which such information can be used in SIGINT product.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

IMPACT: The loss of this document is a damaging compromise of the technical areas of concentration of the National SIGINT Effort as it reveals that resources are expended on: (1) the recovery of cipher systems, (2) the technical and operational characteristics of foreign signals, e.g., signal characteristics, callsigns, and network construction, frequencies and schedules, and (3) foreign cryptographic systems to the point where details of systems employed by a target can be reported.

✓ TECHINS 4058

TITLE: Use of Collateral in SIGINT Product

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document defines collateral as information derived from any source other than a SIGINT source (i.e., COMINT, ELINT, TELEMETRY, or other electronically transmitted or emitted signal or impulse). It defines the applicability of collateral to and its use in SIGINT reporting and prescribes: (1) the conditions to be met prior to use in SIGINT product, (2) the records to be maintained by the product originator, and (3) documentation procedures.

(b) (1)  
(b) (3)-50 USC 405  
(b) (3)-18 USC 790  
(b) (3)-P.L. 86-36

IMPACT: The loss of this document comprises a serious compromise in that it: (1) references service directives (DIAR 50-10, AR 381-1, OPNAV INST 5509.39, and AFR 205-19), (2) reveals caveats used by the members of the SIGINT community (NOFORN, [redacted])

[redacted] and thus reveals a working relationship with collaborators, and (3) gives an indication of the way collateral information is used in product.

✓ TECHINS 4301

TITLE: ELINT Product Reporting

CLASSIFICATION: SECRET GP-1

105

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

CONTENTS: This document defines ELINT (information derived from foreign noncommunications electromagnetic radiations emanating from other than an atomic detonation or radioactive sources), and establishes procedures and defines the basis for product reporting.

IMPACT: The loss of this document constitutes a negligible compromise as it reveals little that already has not been published in open source documents. The TECHINS is primarily an administrative and editorial guide and does not indicate the extent of our interest or reveal any successes.

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

TECHINS 6002

TITLE: SIGINT Minimize Procedures

CLASSIFICATION: SECRET HVCCO

CONTENTS: This document provides information in general relative to the type(s) of material/information generated within the NSE and forwarded electrically under normal circumstances but decreased in precedence or to be forwarded by courier under MINIMIZE conditions.

IMPACT: Compromise of this document would not seriously affect the cryptologic effort except to give an enemy an insight into how to disrupt and slow down the electrical exchange of information between and among the members of the community by disrupting communications so that a MINIMIZE might be declared.

107

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

**TOP SECRET**✓ TECHINS 7010TITLE: Informal Technical NotesCLASSIFICATION: SECRET HVCCOCONTENTS: This document contains general information on the types of technical data exchanged between and among members of the cryptologic community.IMPACT: Compromise of this document would not seriously affect the U. S. cryptologic effort./ TECHINS 7011 with Changes 1 through 4TITLE: Cryptologic Information PublicationsCLASSIFICATION: SECRET (Annex is Codeword)CONTENTS: This document describes the reporting of cryptologic information not released to SIGINT customers.IMPACT: This document reveals that certain information is handled separately from normal SIGINT product and is of special interest to NSA. Its compromise would not seriously affect the cryptologic effort.✓ TECHINS 7013 with Changes 1 through 7TITLE: Standard Translation TablesCLASSIFICATION: SECRET HVCCOCONTENTS: This document establishes standard methods for converting foreign languages (particularly Cyrillic) to romanized form with Morse equivalents.IMPACT: This document reveals that NSA establishes standard methods of reporting translations. No serious damage would result in its compromise.

108

~~HANDLE VIA COMINT CHANNELS ONLY~~**TOP SECRET**

~~TOP SECRET~~J TECHINS 7014TITLE: Procedures for Providing Information Support to  
U.S. SIGINT Field Units (C)CLASSIFICATION: SECRET HVCCO

CONTENTS: This document establishes procedures for providing collateral materials and information to U.S. SIGINT field units in support of their missions; and to provide guidance for the systematic processing of such materials for most effective information support. It defines collateral materials as those documentary materials, obtained from both classified and unclassified sources, containing information about people, places and things, organizations, activities and events which are of value in support of the U. S. SIGINT effort and specifically states SIGINT serialized product and SIGINT technical information such as cryptanalytic recoveries, traffic analytic data, callsign and frequency allocations, etc., are not included. It states the Director, National Security Agency has the responsibility to compile for each U.S. SIGINT field unit, a listing of the specific collateral materials considered essential to the effective performance of the unit's mission; such listings will be coordinated through appropriate Service Cryptologic Agency Field Headquarters; states listings concerning [redacted] for review and comment and also refers to USARPAC or TAREX/ASAE as a possible source for providing certain information.

IMPACT: The loss of this document does not constitute a serious compromise since a compilation of specific collateral materials considered essential to the mission of the PUEBLO had not been prepared. However, it reveals that TAREX collects material for the SIGINT Community.

(b) (1)  
(b) (3)-50 USC 403  
(b) (3)-18 USC 798  
(b) (3)-P.L. 86-36

109

~~HANDLE VIA COMINT CHANNELS ONLY~~~~TOP SECRET~~

**TOP SECRET**✓ TECHINS 9001TITLE: Procurement of Classified and/or Sensitive Rubber StampsCLASSIFICATION: CONFIDENTIAL

CONTENTS: This TECHINS outlines the procedures for procurement of classified and/or sensitive rubber stamps. It defines classified stamps as "stamps that contain classified information, such as COMINT Codeword stamps" and sensitive stamps as "stamps that reveal or imply relationship between the U. S. Government and foreign governments and stamps that direct special handling and/or channeling." It also outlines the channels through which these stamps will be ordered.

IMPACT: The loss of this document would not constitute a serious compromise since it only reveals:

(1) That NSA has material that requires protection by a "COMINT Codeword". (It does not reveal the categories or actual codewords).

(2) That NSA supplies the Service Cryptologic Agencies, DIA and the FBI with "COMINT Codeword and sensitive stamps".

✓ TECHINS 9003 with Changes 5, 10 and 11TITLE: Categorization of COMINTCLASSIFICATION: TOP SECRET TRINE

CONTENTS: This document defines various categories of COMINT and degree of sensitivity the U.S. applies to each.

IMPACT: This document reveals 2nd Party collaboration; existence of special sources, existence of 3rd Party sources by station designators, certain classification criteria, and (in Annexes) specific categorization/classification rules after COMINT material assigned to the various categories. The latter is a definite revelation of success both from a T/A and C/A and collection standpoint in addition to referencing other documents which are even more specific in their revelation.

110

(b) (3) - P.L. 86-36

b. recognize encrypted message externals and decipher them by employing cryptanalytic techniques including the use of charts, keys and other devices;

c. analyze frequencies, callsigns, skeds, chatter and practice traffic -- by using timely analytic aids and raw traffic.

The distribution of the document includes

IMPACT: The loss reflects the NSA/SCA ability to intercept, identify, and process raw intercepted material.

✓ TECHINS 9117

TITLE: Technical Support for SIGINT Training

CLASSIFICATION: CONFIDENTIAL (GP-1)

CONTENTS: This TECHINS provides general instructions relative to provision of technical material in support of SIGINT training. It reiterates the need-to-know principle governing the dissemination and use of SIGINT. The document further provides the format for the preparation and processing of SCA requests for SIGINT technical material from NSA, establishes the NSA criteria for evaluation of such requests and furnishes the mailing address of Commandant, National Cryptologic School to facilitate processing of the requests for technical support.

IMPACT: It reflects formal procedures for providing unspecified reports, technical support letters, working aids, magnetic tape recordings, transcripts, translations, dictionaries, glossaries and other material developed primarily for support of SIGINT operations. The document should have no adverse affect on any U.S. intelligence source.

✓ TECHINS 9201

TITLE: Signals Research Operating Procedures

CLASSIFICATION: SECRET SAVIN

118

~~HANDLE VIA COMINT CHANNELS ONLY~~

~~TOP SECRET~~

~~TOP SECRET~~

CONTENTS: This document outlines operating procedures for the conduct of Signals Research at R/D field sites. Signal designators assigned and used by NSA are defined. Detailed procedures are given for search and collection of signals to permit precision measurements to be made for the stated purpose of providing the technical data base required for designing and developing SIGINT systems and techniques. The technical sophistication of the instrumentation at R/D field sites is implicit in the document. All numbering and tagging procedures and terminology relative to signal storage media and documentation are described. All recording media used by R/D from perforated tape to video tape are specifically mentioned with the identifying alpha-numeric designators which are used for each. The Annex attached to this document is a sample R/D log which was provided for the purpose of illustrating typical logging format and content.

[redacted] Five R/D tasks are specifically mentioned by alpha-numeric designator, but only one of these (R34-63-11) identifies the target signal, which in this case is [redacted] intercepts in connection with [redacted] are also specifically mentioned.

(b) (1)  
(b) (3)-50 USC 403  
(b) (3)-P.L. 86-36

IMPACT: The loss of this document reveals:

1. The degree of technical sophistication in both hardware and procedures used by NSA to collect and analyze foreign communications systems for technical intelligence.
2. Some measure of the degree of success of our SIGINT effort through remarks in the Annex cited above.
3. The location of two of our intercept sites engaged in signals research.

~~TOP SECRET UMBRA~~

✓ Non-Morse Search and Development (NMSDB) Working Aid for  
AGER Operations (Operating Procedures)

CLASSIFICATION: SECRET SAVIN

CONTENTS: This document provides technical guidance to the AGER concerning operating procedures and techniques for the conduct of NMSDB when tasked by DIRNSA. The document includes search procedures, recording techniques, method of preparing an operator's log and forwarding instructions. Included in the document was a sample operator's log.

IMPACT: The loss of this document is considered a serious compromise since it reveals:

(1) that NMSDB environmental studies are conducted in the radio frequency spectrum from [ ] Megahertz and are made from the peripheral areas of specified countries of SIGINT interest.

(2) that a comprehensive search is conducted for the detection of new or unusual signal systems.

(3) the detailed procedures (e.g., standardized search plans, intercept and recording techniques, forwarding instructions) of the NMSDB operations aboard an AGER.

(4) a sample operator's log. This log, when compared with associated TECHINS/TEXTA, i.e., TECHINS 1021 and [ ] cards, could reveal the country and type of transmission that was hypothetically intercepted; however, ship coordinates were omitted from the sample.
